4. Branch Management
5. Merge Conflicts & Resolution
6. Advanced Scenarios
7. Best Practices
8. Troubleshooting

Getting Started

Prerequisites:

- Git installed from <https://git-scm.com/>
- GitHub Account with access to company repo
- Text Editor/IDE (VS Code, IntelliJ, etc.)
- Terminal/Command Prompt

Verify Installation:

```
git --version  
git config --global user.name "Your Name"  
git config --global user.email "your.email@company.com"
```

Initial Repository Connection

Step 1: Clone Repository using HTTPS

```
git clone https://github.com/company/project.git  
cd project
```

Step 2: Clone Repository using SSH (More Secure)

Generate SSH key first:

```
ssh-keygen -t ed25519 -C "your.email@company.com"  
eval "$(ssh-agent -s)"  
ssh-add ~/.ssh/id_ed25519
```

Then clone with SSH:

```
git clone git@github.com:company/project.git
```

Daily Workflow

Morning: Start Your Day

```
cd project  
git checkout main  
git pull origin main  
git status
```
